

Employment Opportunities:

Since the firm was founded in 1968, it has provided services for over 5000 projects ranging in size from a few test borings to full geotechnical engineering services for locations throughout the southeastern United States. Beaver Engineering presently employs two engineers, five engineering technicians, two drillers, and a three-person office staff. We make about 100 geotechnical investigations in Middle Tennessee each year, and make construction observations on about 150 projects each year. We test soils delivered to our laboratory from all over the United States, providing assistance to environmental firms and laboratories, geotechnical firms, contractors, and owners.

At this time we would like to employ a geologist who can train to become an engineering geologist. This candidate may have either a BS or MS in Geology. We want someone with training in math and science, but not in environmental science. We offer competitive salaries and fringe benefits.

We also would like to employ a secretary who has complete proficiency in Microsoft Word, Outlook, and Excel; knowledge of Access would be helpful. Accuracy and attention to detail are the most important aspects required of this position. The applicant should be a self-starter and have the ability to handle multiple tasks. Salary will be commensurate with experience. Benefits include insurance, vacation and a retirement package.
